

**Assignment 5**  
**CY102: Physical Chemistry**  
**30.3.2004**

1. Will the reaction  $\frac{1}{2}\text{Pb}(s) + \text{Ag}^+ (a=1) = \frac{1}{2} \text{Pb}^{2+}(a=1) + \text{Ag}(s)$  be spontaneous? Given:  $E^0(\text{Ag}^+/\text{Ag}) = 0.799 \text{ V}$ ;  $E^0(\text{Pb}^{2+}/\text{Pb}) = -0.126 \text{ V}$ . **(Ans: Yes;  $E^0 \text{ cell} = +0.925 \text{ V}$ )**

Ans:  $\text{Pb} / \text{Pb}^{2+} // \text{Ag}^+ / \text{Ag}$   
 $a=1 \quad a=1$

$E^0_{\text{cell}} = 0.799 - (-0.126) = 0.925 \text{ V}$ , spontaneous.

2. Write the cell reaction for the cell  $\text{Sn}/\text{Sn}^{2+}(0.1 \text{ M}) // \text{Fe}^{3+}(0.3 \text{ M}) / \text{Fe}$  and calculate the EMF of the cell. Given:  $E^0(\text{Sn}^{2+}/\text{Sn}) = -0.136 \text{ V}$  and  $E^0(\text{Fe}^{3+}/\text{Fe}) = -0.0360 \text{ V}$ . **(Ans: 0.1193 V)**

Ans:  $3 \text{ Sn} + 2 \text{ Fe}^{3+} = 3 \text{ Sn}^{2+} + 2 \text{ Fe}$   
 $(0.3 \text{ M}) \quad (0.1 \text{ M})$

$E_{\text{cell}} = E^0_{\text{cell}} - 0.0591/6 \log [\text{Sn}^{2+}]^3/[\text{Fe}^{3+}]^2$   
 $= 0.10 - 0.0591/6 \log 0.1/9 = 0.1 + 0.0192 = 0.1192 \text{ V}$ .

3. For the cell  $\text{SCE} // \text{AgNO}_3 / \text{Ag}$ , the EMF of the cell was found to be  $0.4 \text{ V}$ . Calculate the  $\text{Ag}^+$  concentration if  $E_{\text{SCE}} = 0.246 \text{ V}$  and  $E^0(\text{Ag}^+/\text{Ag}) = 0.799 \text{ V}$ . **(Ans:  $2.57 \times 10^{-3} \text{ M}$ )**

Ans:  $E = E_{\text{Ag}^+/\text{Ag}} - E_{\text{SCE}} = 0.4 \text{ V}$ .

$E_{\text{Ag}^+/\text{Ag}} = 0.4 + 0.246 = E^0_{\text{Ag}^+/\text{Ag}} + 0.0591 \log [\text{Ag}^+]$

$0.646 - 0.799 = 0.0591 \log [\text{Ag}^+]$

$\log [\text{Ag}^+] = -2.5888$

$\therefore [\text{Ag}^+] = 2.57 \times 10^{-3} \text{ M}$ .

4. Calculate  $\Delta G$ ,  $\Delta H$  and  $\Delta S$  for the cell  $\text{Ag} / \text{AgCl} / \text{KCl} (\text{soln}) / \text{Hg}_2\text{Cl}_2, \text{Hg}$  if the EMF of the cell is  $0.0445 \text{ V}$  at  $25^\circ\text{C}$  and the temperature coefficient is  $3.38 \times 10^{-4} \text{ V/degree}$ .

**(Ans: -4294 J, 5421 J, 32.6 JK<sup>-1</sup>)**

Ans:  $\text{Ag}(s) + \frac{1}{2} \text{Hg}_2\text{Cl}_2(s) = \text{AgCl}(s) + \text{Hg}(l)$

$\Delta G: -nFE = -1 \times 96500 \times 0.0445 = -4294.3 \text{ J}$

$\Delta S = nF(\Delta E/\Delta T)_p = 1 \times 96500 \times 3.38 \times 10^{-4} = 32.6 \text{ Jk}^{-1}$

$\Delta H = \Delta G + T\Delta S = -4294.3 + 32.6 \times 298 = 5420.5 \text{ J}$ .

5. Calculate the equilibrium constant for the reaction that occurs in the cell  $\text{Sn}|\text{Sn}^{2+}(a=1) || \text{Pb}^{2+}(a=1) | \text{Pb}$  if  $E^0_{\text{cell}}$  is  $0.014 \text{ V}$  at  $25^\circ\text{C}$ . **(Ans: 2.97)**

Ans:  $\log K = nE^0/0.0591 = 2 \times 0.014 / 0.0591 = 0.4738$

$K = 2.98$

6. From the data provided, compute the standard half-cell potential for the reaction  $\text{Fe}^{3+} + 3e^- = \text{Fe}$ .

**Half-cell reaction**  **$E^0/\text{V}$  at 298 K**

$\text{Fe}^{3+} + e^- = \text{Fe}^{2+}$  +0.77

$\text{Fe}^{2+} + 2e^- = \text{Fe}$  -0.44

**(Ans:  $E^0 = -0.04 \text{ V}$ )**

Ans:  $\text{Fe}^{3+} + 3e = \text{Fe}$ ,  $E^0 = 1(0.77) + 2(-0.44)/3 = -0.037 \text{ V}$ .

7. The EMF of the cell SCE // HCl / quinhydrone (Pt) at 298K is + 0.25 V. Find the pH of the solution if  $E_{\text{SCE}} = 0.24 \text{ V}$  and  $E^0(\text{Q}, \text{H}_2\text{Q}) = 0.70 \text{ V}$  at 298 K.

**(Ans: 3.55)**

Ans:  $E_{\text{cell}} = E_{\text{H}_2\text{Q}/\text{Q}} - E_{\text{SCE}}$   
 $= (E^0_{\text{H}_2\text{Q}/\text{Q}} - 0.0591 \text{ pH}) - E_{\text{SCE}}$   
 $0.25 = (0.699 - 0.0591 \text{ pH}) - 0.24$   
 $\text{pH} = 3.54$ .

8.  $\Delta G$  and  $\Delta H$  for the cell  $\text{Cd} / \text{CdCl}_2(\text{aq}) / \text{AgCl}(\text{s}) / \text{Ag}$  are  $-130.3$  and  $-167.5 \text{ kJmol}^{-1}$  respectively at 300 K.

**(Ans:  $6.4 \times 10^{-4} \text{ VK}^{-1}$ )**

And:  $\text{Cd} + 2 \text{AgCl} = \text{Cd}^{2+} + 2 \text{Ag} + 2\text{Cl}^-$   
 $\Delta G - \Delta H / T = -130.3 + 167.5 / 300 = 0.124 \text{ kJ K}^{-1} = -\Delta S$   
 $-\Delta S = -124 \text{ JK}^{-1} = 2 \times 96500 \times (\Delta E/\Delta T)_p$   
 $\therefore (\Delta E/\Delta T)_p = -6.42 \times 10^{-4} \text{ VK}^{-1}$ .

9. For the cell  $\text{Ag} / \text{AgI} / \text{I}^- // \text{Ag}^+ / \text{Ag}$ ,  $E^0(\text{I}^- / \text{AgI} / \text{Ag}) = 0.152 \text{ V}$ . Find the solubility product of AgI.

**(Ans:  $1.95 \times 10^{-17}$ )**

Ans:  $\text{Ag} + \text{I}^- \rightarrow \text{AgI} + e$   
 $\text{Ag}^+ + e \rightarrow \text{Ag}$   
 $\text{Ag}^+ + \text{I}^- \rightarrow \text{AgI}$ ;  $E^0 = 0.951$   
 $\text{AgI}(\text{s}) \rightleftharpoons \text{Ag}^+ + \text{I}^-$ ;  $E^0 = -0.951$   
 $\log K_{\text{sp}} = 1 \times -0.951 / 0.0591 = -16.09$   
 $K_{\text{sp}} = 8.10 \times 10^{-17}$ .

10. For the cell  $\text{Al} / \text{Al}^{3+} // \text{Sn}^{4+}, \text{Sn}^{2+} / \text{Pt}$ , the standard electrode potentials at 298K are  $E^0(\text{Al}^{3+}/\text{Al}) = -1.66 \text{ V}$  and  $E^0(\text{Sn}^{4+}, \text{Sn}^{2+}/\text{Pt}) = +0.15 \text{ V}$ . Calculate

(a) the cell EMF when the activities are all 0.1.

(b) the equilibrium constant. Comment on the magnitude of the equilibrium constant.

**(Ans: (a) 1.83 V and (b)  $10^{186}$ )**

Ans: (a)  $2\text{Al} + 3 \text{Sn}^{4+} \rightarrow 2\text{Al}^{3+} + 3 \text{Sn}^{2+}$   
 $E = 1.81 - 0.0591 / 6 \log 0.01 = 1.81 + 0.0197 = 1.83 \text{ V}$ .  
(b)  $\log K = 6(1.81) / 0.0591 = 183.76 \approx 184$   
 $\therefore K = 10^{184}$ .

11. The solubility product of CuCl at 298 K is  $2.29 \times 10^{-7}$  and the standard reduction potential for the half-cell  $\text{Cl}^- (\text{a}=1) / \text{CuCl}(\text{s}) / \text{Cu}$  is 0.129 V. Calculate the standard electrode potential of the couple  $\text{Cu}^+ / \text{Cu}$ .

**(Ans: 0.522 V)**

Ans:  $\text{CuCl}(\text{s}) = \text{Cu}^+ + \text{Cl}^-$ ;  $K_{\text{sp}} = 2.29 \times 10^{-7}$   
 $E^0_{\text{cell}} = 0.0591 \log K_{\text{sp}} = -0.39 \text{ V}$ .

$$-0.39 = 0.129 - E^0_{\text{Cu}^+ / \text{Cu}}$$

$$\therefore E^0_{\text{Cu}^+ / \text{Cu}} = 0.52 \text{ V.}$$

12. Write the working principles, half-cell reactions and the half-cell representations of the following reference electrodes:

- (i) SHE
- (ii) Saturated calomel
- (iii) Quinhydrone
- (iv) Silver-silver chloride
- (v) Glass
